

SeedGrid 32x64 - Draw Record (12-word seed)

After each draw, write the A and B values you drew, then the word at cell (A, B).

Return both tokens before the next draw. Words 1-11 are drawn from the grid; word 12 is a checksum - compute it with an air-gapped device such as SeedSigner, and never type your phrase into a website.

Draw log - rows 1-11 are drawn; row 12 is the checksum (not drawn)

Draw	A	B	Index	Word
1				
2				
3				
4				
5				
6				
7				
8				
9				
10				
11				
12	-	-	-	CHECKSUM (not drawn) - use SeedSigner

Final seed phrase - write the 12 words in order (word 12 is a checksum)

1	2	3
4	5	6
7	8	9
10	11	12 CHECKSUM
		word 12

(checksum word - use SeedSigner or another wallet that allows you to calculate the last word)

Notes / verification
